

Workflow 00 – AI Collaboration Layer

Implementation Directive for Claude Code v1.0

Mission

Build the permanent collaboration layer that allows ChatGPT and Claude Code to work from the same repository state without relying on chat history, PDFs, or manual handoffs. The repository—not either AI—becomes the permanent engineering memory.

Roles

ChatGPT: Principal Software Architect and Chief AI Architect. Responsible for architecture, standards, governance, documentation, engineering review, and implementation specifications.

Claude Code: Principal Implementation Engineer. Responsible for implementation, testing, repository changes, automation, and keeping engineering state current.

Repository Structure

```
AI_TEAM/  
BOOK_00/  
architecture/  
docs/  
workflows/  
adr/
```

Create AI_TEAM

```
00_STATUS.md  
01_ROADMAP.md  
02_ACTIVE_WORK.md  
03_DECISIONS.md  
04_ARCHITECTURE.md  
05_BACKLOG.md  
06_NEXT_SESSION.md  
07_BLOCKERS.md  
08_CHANGELOG.md  
09_HANDOFF_PROTOCOL.md
```

Required Operating Rules

Before starting implementation, always read the AI_TEAM status, architecture, decisions, blockers, next session, and BOOK_00 documents.

Before ending every work session, update STATUS, ACTIVE_WORK, NEXT_SESSION, BLOCKERS, CHANGELOG, and any affected architecture or decision records.

ChatGPT Operating Rule

Future architecture sessions should begin by reading AI_TEAM and BOOK_00 rather than relying on previous chat history.

Documentation Standard

The repository is the single source of truth. Chats are temporary. PDFs are release artifacts. Repository documentation is permanent engineering memory.

Deliverables

Populate AI_TEAM using the current HCI AI Operating System state. Create docs/AI_COLLABORATION_STANDARD_v1.md documenting roles, workflow, decision logging, session procedures, architecture updates, approval gates, and failure recovery.

Optional Automation

```
.github/workflows/update-ai-status.yml  
scripts/generate_ai_status.py  
scripts/update_changelog.py  
scripts/create_next_session_summary.py
```

Success Criteria

Buck no longer manually translates work between AIs. ChatGPT and Claude Code synchronize through repository documentation. Book 00 remains the canonical engineering manual. The project survives lost chats because the repository owns the memory.
