

Workflow 00 - AI Collaboration Layer

Claude Code Implementation Directive v1.0

Mission

Build the permanent collaboration layer that allows ChatGPT and Claude Code to work from the same repository state without relying on chat history, PDFs, or manual handoffs.

Core principle: The repository remembers.

Roles

Buck: Product Owner and Engineering Lead.

ChatGPT: Principal Software Architect and Chief AI Architect. Responsible for architecture, governance, documentation standards, implementation specifications, and engineering review.

Claude Code: Principal Implementation Engineer. Responsible for implementation, tests, refactoring, automation, repository edits, and keeping engineering status current.

Build Objective

Create or update the repository-level operating structure that lets both AI systems synchronize through the repository.

```
AI_TEAM/  
BOOK_00/  
docs/  
architecture/  
adr/  
workflows/  
scripts/  
.github/workflows/
```

Required AI_TEAM Files

```
AI_TEAM/00_STATUS.md  
AI_TEAM/01_ROADMAP.md  
AI_TEAM/02_ACTIVE_WORK.md  
AI_TEAM/03_DECISIONS.md  
AI_TEAM/04_ARCHITECTURE.md  
AI_TEAM/05_BACKLOG.md  
AI_TEAM/06_NEXT_SESSION.md  
AI_TEAM/07_BLOCKERS.md  
AI_TEAM/08_CHANGELOG.md  
AI_TEAM/09_HANDOFF_PROTOCOL.md
```

Claude Code Start Rule

Before starting implementation, read the following repository documents:

```
AI_TEAM/00_STATUS.md  
AI_TEAM/02_ACTIVE_WORK.md  
AI_TEAM/03_DECISIONS.md
```

```
AI_TEAM/04_ARCHITECTURE.md
AI_TEAM/06_NEXT_SESSION.md
AI_TEAM/07_BLOCKERS.md
BOOK_00/
docs/AI_COLLABORATION_STANDARD_v1.md
```

Claude Code End Rule

Before ending every work session, update the repository state:

```
AI_TEAM/00_STATUS.md
AI_TEAM/02_ACTIVE_WORK.md
AI_TEAM/06_NEXT_SESSION.md
AI_TEAM/07_BLOCKERS.md
AI_TEAM/08_CHANGELOG.md
```

If an architecture or product decision was made, update AI_TEAM/03_DECISIONS.md and create or update an ADR. If architecture changed, update AI_TEAM/04_ARCHITECTURE.md, architecture/CURRENT_ARCHITECTURE.md, and BOOK_00.

ChatGPT Start Rule

ChatGPT should begin future engineering sessions by reading AI_TEAM and BOOK_00 rather than relying on previous chat memory.

Implementation Deliverables

1. Merge this package into the active HCI AI repository.
2. Preserve existing files and merge, do not blindly overwrite.
3. Populate AI_TEAM with actual current repository state.
4. Create docs/AI_COLLABORATION_STANDARD_v1.md.
5. Create workflows/WORKFLOW_00_AI_COLLABORATION_LAYER.md.
6. Create adr/ADR-0001-repository-as-ai-memory.md.
7. Add optional automation stubs only after manual process is clear.
8. Update status, blockers, changelog, and next-session files before stopping.

Do Not

```
Do not redesign HCI AI.
Do not create duplicate registries.
Do not create duplicate SOP frameworks.
Do not overwrite existing repository content without merging.
Do not automate before the manual process is stable.
Do not remove human approval gates.
```

Human Approval Gates

Buck approval is required for budgets, vendor awards, contracts, change orders, client-facing communications, legal or financial commitments, production deployment, and external integrations affecting company data.

Success Criteria

Workflow 00 is successful when Buck can start any future ChatGPT or Claude Code session with:

```
Read AI_TEAM and continue.
and the AI can understand current repository state without Buck manually explaining prior chat history.
```

First Task for Claude Code

Copy or merge this package into the repository. Create or update AI_TEAM. Populate it with actual current project state. Confirm Book 00 location. Commit the result as Workflow 00: AI Collaboration Layer.
